Cully Energy Plan PAC Meeting #2

Meeting Notes

March 20th 2017

Present: Taren Evans, Alan Hipolito, Zach Sippel, Cameron Herrington, Holly Braun, Andria Jacobs, Kelly Haines, Oriana Magnera, Maiyee Yuan, Eron Riddle

Welcome and Check-in:

Presentation of current energy conservation efforts in Cully:

- Energy Investments brings it into affordability (meaning the home costs become a little bit more affordable), which means that they might be able to spend a little more on housing mortgage
- Eron's work, through his work—he is becoming more of a case manager. Knowing all the programs and how to make things work better.
- PCRI pilot was an opportunity to go around the community action agency. Was it possible to partner with an entity by going around the CAA, that way NWnatural could work with a bulk of owners rather than through one home at a time.

Presentation of Model

- The only thing I got was that a couple of folks were curious around energy resilience in the vision
- Vision is pretty broad
- Make sure that the anti-displacement attribute correlate with the vision

Baseline

Energy intensity by square foot

Solar baseline

Looking at market shielded homes?

We can't focus on income because low-income people are forced out
